

Summary for Bridging Gullmarsplan Green Musketeers

The project connects Gullmarsplan, Årstaskogen, and the surrounding city districts and nature areas. Furthermore, the project addresses the voiced lack of activities and identity in the area. The solutions proposed focus on the following areas:

Connections and Mobility

- Lack of connections and directions make it difficult for spatial orientation. New pathwalks and a completely new pedestrian and cycling bridge makes the area accessible
- Working with the tunnel increases the feeling of safety

Activities and Identity

- The square provides a meeting point and a place to start the exploration of the area
- The area between the recreational and educational centers is reactivated and becomes an attractive part of the area
- The space under the bridge provides unique cultural and recreational experiences
- The Waterfront accentuates the connection to the water
- Both digital and analog tools are used to engage different parts of the community

Environment and Biodiversity

- A green corridor is developed to connect the forest with the surroundings
- Walls with vegetation provide shelter from the noise of the traffic
- Meadows help the pollinators
